

Leyland Cyprus Removal and Replacement

Many of the Leyland Cyprus shrubs that form a screen along holes #5, 6, 7 and 11 have become victim to blight and mite attack. There are between 100 -115 Leylands that need replacing, (some are completely dead, some are not dead but have been stressed)

Behind #6 green	16 plants
Beside #7 tee box	22
Surrounding #7 green	55
Behind #8 tee box	16
Behind #10 green	6

Dead Leylands at #7 Tee

We feel the best solution for this problem is to cut the dead/damaged Leylands down at the base of the shrub, leaving the root base to prevent erosion. Giant arborvitae (5 gal) would be planted to fill in the gaps. The current Leylands are planted at 5 ft intervals, the arborvitae would be planted in 10 ft intervals which would give them more room to grow. These plants have no serious disease or pest problems.

The total cost for this project is \$4000 (based on 115 Leylands replaced). A detailed estimate based on 100 shrubs replaced is attached.
